

Merge evidence, made inspectable.

Scope

Public Kiota methodology sample; historical agent-authored squash merges in the committed study dataset. Microsoft is not a customer.

microsoft/kiota · 77 selected record(s).

Public Kiota methodology sample. Microsoft is not a customer; no customer relationship or endorsement is implied.

75 VERIFIED	2 NOT_PROVEN	0 FAIL
----------------	-----------------	-----------

77 verdict(s) recorded; 0 unresolvable record(s), excluded from verdict counts. Counts are per record, not per finding.

NOT_PROVEN != bad code. NOT_PROVEN means missing evidence under implemented checks, not defective code. VERIFIED means those checks found no blocking evidence gap; it is not proof of correctness. FAIL means the verifier could not safely establish a result.

Recommendation

Inspect the flagged records and any existing validation of the combined state. If evidence is insufficient for the risk, validate that state and repeat the assessment. Start with the small flagged set rather than changing every merge workflow.

Do nothing is an option. If the recorded limitation is acceptable for this scope, document that decision and leave the workflow unchanged. Accepting a gap does not change a NOT_PROVEN, FAIL or unresolvable record into VERIFIED. No action is executed by this report.

Notable NOT_PROVEN / FAIL records

microsoft/kiota #8093 NOT_PROVEN

BASE_DRIFT_UNVERIFIED

The base advanced by 2 commit(s), with 1 overlapping file(s). This flags a possible evidence gap for the combined state. CI results were not inspected.

Base: 73ab4489e15820fbc63108a373a9b11981445ff6
Candidate: 9554d4f2ed0388f66cd982988c035756f9b05ad8
Landed squash: 6bb3e640237e0cae33d2672107d0b8498369d094

PROTECTED_BOUNDARY

The candidate changed policy. The implemented path checks request closer validation of this boundary; they do not establish that code is defective or that existing CI failed.

Base: 21dc6a2bb62d21bf83923d717d15dd33471ca3e4

Candidate: e5fb44d44b4f4760ee9c41525cc0c6751be06bb1

Landed squash: 591d97e4d20eab8f96b3675064b11b78b9376daa

Method and limits

This report renders recorded study/collect.js output; it does not fetch current repository or CI state. The collector examines selected agent-authored squash merges, using the squash commit first parent as base-at-merge and the fetched PR head as candidate. The source format does not record collection time or merge timestamps, so no date window is inferred. Sampling is purposive and bounded, not representative of all merges. See STUDY.md for methodology.

Implemented blocking checks: BASE_DRIFT_UNVERIFIED (overlapping base drift) and PROTECTED_BOUNDARY (sensitive path categories). Stale-base and CI/deploy path advisories do not affect verdict counts. The source JSON retains detailed metrics, exclusions and advisories; collector rows retain finding IDs rather than full file-level explanations.

Not checked

- **CI_RAN_ON_FINAL_HEAD**: merge-proof does not read CI results; it cannot tell which commit was tested.
- **HUMAN_APPROVAL_PRESENT**: merge-proof does not read reviews or approvals.
- **CANDIDATE_DURABLE_ON_REMOTE**: merge-proof inspects local git state only; it does not query a remote for durability.
- **SCOPE_CREEP_VS_DECLARED_SCOPE**: merge-proof has no declared-scope input to compare the diff against.

This report cannot establish whether CI ran on the exact state that landed. It is not a code review, bug detector, security scan, correctness proof or replacement for CI.

Source: study-data.json

Input SHA-256: fca1168585c354cd6ae340a1c06c0953290974e2f6de27a4c85326b3273f7bd5

Generated solely from the supplied JSON. Re-rendering does not refresh or authenticate its evidence.

Evidence register

All selected records; full refs for notable records appear above. Abbreviated refs below are locators, not additional validation. The input JSON preserves full available evidence.
